

Healthcare-App Telehealth Runbook

TC-CONN-FAIL: Video Connection Failure

Error Code: TC-CONN-FAIL | **Priority:** P1 | **Clinical Area:** telehealth

Description

Patients report a black screen or infinite loading spinner when joining telehealth sessions via the HealthConnect portal. Affects ~15% of mobile Safari and 5% of Chrome desktop.

Immediate Steps

1. Ask the patient to open HealthConnect > Settings > Device Check and run the camera/mic test.
2. If the device check fails, ask the patient to clear browser cache and retry.
3. If still failing on mobile Safari, switch to Chrome or the native app.
4. Escalate to telehealth-support@healthcare-app.internal with a screenshot if unresolved.

Known Root Cause

WebRTC ICE candidate negotiation fails on networks with strict UDP blocking (common in hotel and hospital guest WiFi). TCP fallback scheduled for next release (~2 weeks).

Workaround

Guide patient: HealthConnect > Settings > Connection Mode > Force TCP Relay.

This resolves ~92% of affected sessions. Latency increase is ~80ms, acceptable for clinical use.

Escalation Path

L1 Support -> L2 Telehealth Engineering -> telehealth-support@healthcare-app.internal
